01:00 – 01:20	Activities & Posters
01:20	End of Workshop & Coffee Break

An ACI student chapter refers to a student organization affiliated with the American Concrete Institute (ACI). The American Concrete Institute is a leading organization in the field of concrete construction and technology. ACI student chapters are typically found at universities and colleges around the world.

These student chapters are established to provide students with an opportunity to learn more about concrete technology, construction practices, and related fields.

They often organize events, workshops, seminars, and competitions related to concrete and construction. Being a part of an ACI student chapter can be beneficial for students pursuing careers in civil engineering, architecture, construction management, or any field related to concrete and construction.

ACI student chapters can help students connect with industry professionals, gain practical knowledge, and build a network within the concrete industry.

These chapters are a valuable resource for students interested in expanding their understanding of concrete technology and construction principles.
