

Netflix-Clone

Prepared by: Sarab Fryad Ibrahim

College of science-Computer science and IT Department

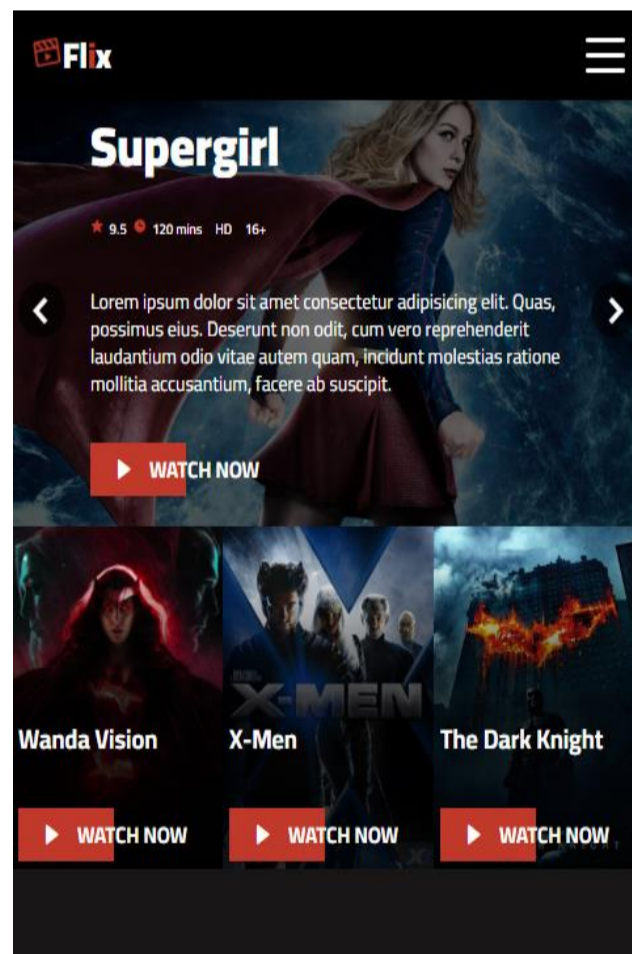

Supervised by: Sajda Hadi Baker

Introduction

Netflix Clone is a free streaming service that allows members to watch TV shows and movies on an internet-connected device. Our platform offers a user-friendly interface, allowing you to dive into a vast array of movies and series effortlessly. With features like user registration, content management, and dynamic data visualization, Netflix Clone transforms the way you experience entertainment.

Design and Analysis

My website consists of several pages the first page is the home page that contain some sections the first section contain the banner images with the navbar and other sections contain movie images with button to show movie video file these sections are latest movies and latest series with animations each of them are organized by categories on movie page the list of all movies will be shown and on series page all uploaded series will be shown also there is a search bar the user can use it for searching for movies the website is managed be the admin which can add new category and upload movies and series also update or delete them ,there is a super admin dashboard that can add or delete admins

Methodology

My website consists of two part the first part is client side(front end) which interacts with users and the second part is server side(back end) which interacts with web server(it is a server where the website is hosted and the database

Conclusion

My project is a video streaming website where user can easily sign-in/sign-up to the site the home page contain of some sections that organized with categories by clicking on a movie also a search bar for searching for movies also the website is fully responsive
