|--------------------|--|------------------|--|
| Date:              | Examination No.: 15367   | Version:1/9/2019 | Start: 1/9/2019  |
| Module Name - Code | Reinforced Concrete Elements   |                  |  |
| Module Language:   | English  |                  |  |
| Responsible:       | Asistant Lecturer<br>Dr. Ahmed Heidayet Mohammad<br><br>And Dr. Zrar Sedeeq O.   |                  |  |
| Lecture (s):       | Asistant Lecturer<br>Dr. Ahmed Heidayet Mohammad<br><br>And Dr. Zrar Sedeeq O.   |                  |  |
| College:           | College of Engineering – Salahaddin University-Erbil   |                  |  |
| Duration:          | 15 week – 1 semester   |                  |  |
| Course outcomes:   | After the end of the semester, the students must be understanding the basic theory of structural mechanics of concrete. The analysis and design methods of reinforced concrete elements can be familiar for the structure subjected to gravity or lateral loads. In addition they can grasp practical requirements of design code specifications for each element separately. Also, the application necessary to prepare students for more advance study for engineering practice are emphasized throughout.   |                  |  |
| Course Content:    | Lecture  | Weeks            | Topics   |
|                    | Introduction   | 1                | Introduction on Concrete and Steel Materials           |
|                    | Beam-<br>Flexural  |                  | Flexural Analysis of Beams                             |
|                    |  | 2                | -Cracking and Cracking Section ( Elastic Stress)       |
|                    |  |                  | -Ultimate Flexural Moment ( With specifications)       |
|                    |  | 2 and 3          | Design and analysis of rectangular Beam                |
|                    |  | 3                | Analysis and Design of T-Beam                          |
|                    |  | 3                | Double Reinforced Beam ( Compression Steel)            |
|                    | Columns  | 4                | Axial loaded Columns                                   |
|                    |  | 4 and 5          | Design of Short Columns Subjected to Axial and Bending |
|                    |  | 6                | Design of Biaxial Loaded Columns.                      |
|                    |  | 6                | Slender Columns ( Long Columns)                        |
|                    | Shear  | 7                | Shear and Diagonal Tension                             |
|                    | ACI Coefficient  | 7                | Approximate Methods-ACI Coefficient Method             |
|                    | Serviceability   | 8                | Calculate and Control of Deflection                    |
|                    |  | 9                | Calculate and Control of Flexural Cracks               |
|                    | Development Length   | 10               | Bond, Development Length and Splices                   |
|                    | Torsion  | 11               | Torsional moment<br>Design of Torsion Reinforcement    |
|                    | Slab   | 12               | Two way Slab<br>-Coefficient Methods                   |
|                    | Footing  | 13               | Design of Single footing.                              |

|                                 |   |
|---------------------------------|---|
| Type of Teaching:               | <p>2hrs+2hrs, per week</p> <p>Different tools and techniques will be used to attain goals and objectives. The following forms are used:</p> <ol style="list-style-type: none"> <li>Power point for main parts (head titles, definitions, objectives, cases, design tables, charts and mathematical equations, also examples ..... ) each subject.</li> <li>White board will be used for presenting and solving some examples.</li> <li>Students will be called to submit assignments defined in advance.</li> <li>Students have to participate in classroom discussions.</li> <li>The attendance (as much as possible) will take in consideration for students.</li> </ol> <p>Visiting to the field site of projects will be done at least one per year which may be considered for student evaluations.</p>  |
| Pre-requisites:                 | Mechanics of Materials and Concrete Technology  |
| Frequency:                      | Yearly in fall semester   |
| Requirements for credit points: | <p><b>Student's obligation</b></p> <ol style="list-style-type: none"> <li><b>Attendance:</b> Students are required to attended lectures. The course consists of primarily of theory lectures and applied lecture. Regular attendance is necessary to maintain pace with the lectures.</li> <li>If the student absence in a lecture, he/she can present in another lecture just twice for each course (just for the same subject).</li> <li>The <b>late attendance</b> to the class are allowed twice ( not more than 15 min.) at the third time recorded absence and subsequent in this way. Maximum allowable late attendance not more than <b>six</b> times.</li> <li><b>Maximum absence 15%</b> per course is allowed. After 10%, taken 1 mark for each hour absence from final efforts (quiz, HW and curved or helped marks).</li> <li><b>Mobile</b> is not allowed to be use, except for taken photo of board after permission of lecturer. If noticed, at firstly returned after lecture, secondly <b>detained</b> for one week, thirdly until end of course.</li> <li><b>Home Works;</b> Homework will be assigned according to the instructions given .The H.W. Will be collect at time scheduled. Late H.W. will minimize the marks.</li> <li><b>Final Exam:</b> Each students must take at least 15M from 40M ( final efforts) to allow to do final exam( from 60).<br/><b>g.</b> Short <b>Quizzes</b> may be given periodically.</li> </ol> <ol style="list-style-type: none"> <li>Bring your calculator to every class. Calculator may not be shed for quizzes or exams. -The quizzes done during the 15 to 20 minutes of the lecture period or at time fixed by instructors.</li> <li>Use pencil for quizzes and exams.<br/>Permission: one quizzes are permitted to be not done.</li> </ol> |
| Credit point:                   | 5   |
| Grade Distribution:             | <p>The Grade is generated from the examination result(s) with the following</p> <p>10% Activity (Quiz , assignment and site visit )</p> <p>30% mid-term exam</p> <p>60% Final exam</p>  |
| Work load:                      | The workload is 150h. It is the result of 60h attendance and 90h self studies.  |
