Introduction:

Recently, many construction projects in Erbil are incomplete or abandoned, with negative impacts on stakeholders, the economy, and the environment. The methodology in this study adopts a qualitative approach to identify the causes of abandonment of construction projects in Erbil, corresponding to the viewpoint of three stakeholders (clients, consultants, contractors) of the construction industry. A literature review on abandoned construction projects was conducted, and interviews were conducted for a range of stakeholders in the building environment in Kurdistan Region. A questionnaire consisted of 15 causes of abandoned construction projects in Erbil.
