Ministry of Higher Education and Scientific research

**Chemistry Department** 

**College of education** 

**University of Salahaddin- Erbil** 

**Course Book: 4<sup>th</sup> stage** 

Subject: Instrumental Analysis / Molecular & Atomic

**Spectroscopic Analysis** 

Lecturer's name: Dr. AVEEN F. JALAL

Academic Year: 2023-2024

Ministry of Higher Education and Scientific research

1. Course name	Instrumental Analysis					
2 Locturer in charge						
2. Lecturer in charge	Dr. AVEEN F. JALAL					
3. Department/ College	Chemistry Department/ Education College					
4. Contact	E-mail: aveen.jalal@su.edu.krd or afaizulla@yahoo.com					
	Tel: 07504069770					
5. Time (in hours) per week	Theory: 2 h					
6. Office hours	Sunday : 8:30 - 10:30, 10:30-12:30					
7. Course code	Nothing					
8. Teacher's academic profile	Dr. AVEEN F. JALAL					
	Lecturer in Analytical Chemistry					
	B.Sc. in Chemistry, from Salahaddin University, College of Education,					
	Chemistry Department, 2005.					
	M.Sc. in Analytical Chemistry, Salahaddin University, College of					
	Education, Chemistry Department, 2011.					
	Thesis: Batch and Flow-injection Spectrophotometric determination of					
	Meloxicam in some Pharmaceutical Formulations.					
	Supervisor: Assist. Prof. Dr. Shirwan O. Baban.					
	Ph.D. in Analytical Chemistry, Salahaddin University, College of					
	Education, Chemistry Department, 2022.					
	Thesis: Synthesis and Characterization of New Modified Magnetized					
	Nanomaterials and Macrocyclic Compound to Remove Some Cationic Dyes					
	in Textile Fiber Samples.					
	Supervisor: Prof. Dr. Nabil Adil Fakhre					
	No. of Publications: (10).					
9. Keywords	Instrument, Analysis, Molecular spectroscopy, Atomic spectroscopy					

## **10.** Course overview:

- This course presents a survey of instrumental methods of chemical analysis. We will focus on understanding the fundamental principles underlying instrumental methods and their realization in modern instrumentation for chemical analysis. We will focus on the following broad methodological areas: optical spectroscopy and Electrochemistry, .We focus on principles and concepts of implementation should provide greater insight both into how current instruments work as well as the basis for your understanding how they will work a decade from now. Lastly, we will pay attention to the chemical systems to which these methods are applicable and how best to obtain the chemical information desired using the most appropriate instrumental methods. The most important topics in this course are:
- Instruments for Optical Spectrometry,
- Luminescence's methods,

# **11. Course objective:**

Instrumental analysis course will explain the theory of operation, instrumental design, methodology, and applications of instrumental techniques of spectroscopic methods including UV/VIS and Luminescence's methods,

At the end of the course, learner will be able to:

- Recognize the theory of operation, instrumental design and application of various instrumental methods.
- Understand and apply the various spectroscopic methods.
- Apply various electroanalytical methods.
- The main objective of this course is to introduce students to the modern instrumental methods of quantitative and qualitative analysis and to learn about the fundamental principles of operation of these methods, concentration will be drawn basically to spectroscopic and electroanalytical methods, their strengths and limitations and their application in Analysis will be discussed.

### 12. Student's obligation

It is important to realize that it is not possible to learn all that you need to know about Instrumental Analysis from just the text, lectures, supplemental readings, or problem sets. Rather, attention must be paid to all of these areas as the material covered in each is designed to be complementary. I think that you will find that the problems in the problem sets will be easier to solve if you've attended the lectures and done the assigned readings.

I encourage you to come to lecture having already read the assigned material as I would prefer to spend as much of our class time discussing the material, answering your questions about the material and asking you questions about the material. Obviously, our time in class will only be meaningful if you've already read the assigned readings for that particular unit.

Your attendance in class is, of course, expected - if there is a class that you know you will not be able to attend, please let me know ahead of time so that we can make sure you don't miss anything.

Problem sets will not be collected and are not "due" at any particular time -- it is in your best interests, however, to work the problem sets contemporaneously with the lecture material. Detailed solutions to the problems sets will be made available online at the course website. Problems just like or very similar to those on the problem sets have a habit of finding their way onto exams, so it would be prudent of you to ensure that you can work the relevant problem set problems before you take one of the exams.

# 13. Forms of teaching

Classes will primarily consist of lecture with some in-class discussion, tutorials, problem solving, debates, and some demonstrations. Questions at any time during class are highly encouraged. Lectures will be accompanied with power point presentations of the head titles and notes.

The textbook is a good, general place to start your study of most of the topics that we will cover (and a good book to keep on your bookshelf for future reference), although we will often cover topics differently or at greater depth than is found within this book. Many additional, useful sources are on reserve. You are encouraged to read as many sources as possible because learning from several different viewpoints will deepen your knowledge and more closely simulate how you will learn new material in the future.

Experience has shown that the students who attend class, read more references, and complete more problems do much better! To be successful you will have to spend a significant amount of time on this course outside of the class time.

## 14. Assessment scheme

This course is divided into two portions: lecture and laboratory.

The lecture portion constitutes 65% of the overall final grade, while the laboratory portion constitutes 35%. **Lecture Grade** 

The Lecture grade for this course is based on, one-hour exam (15 pts), and a comprehensive final exam (50 pts).

Ministry of Higher Education and Scientific research

**Quizzes:** A quiz will be given in the beginning of the lectures. Any topic previously covered in the course is fair game for a quiz question.

**Exams:** One hour midterm exam will be given during the year at normal class times as indicated on the attached class schedule and one comprehensive final at the end of the course. Exams will comprise material and problems similar to those discussed during class lecture, textbook example problems and problems assigned at the end of each chapter of the text. In class examinations will generally concentrate on new material covered since the last exam. The final examination will be comprehensive and cover material from the entire course.

## **15. Student learning outcome:**

By the end of the course students will be able to:

1. Acquire a detailed understanding of the principles of operation of modern analytical instrumentation.

2. Demonstrate critical thinking, quantitative reasoning, and scientific knowledge related to the wide variety of choices that must be made when using instrumental methods to solve analytical problems.

3. Acquire more advanced laboratory skills associated with the collection, handling, and evaluation of analytical data. The students will also demonstrate competence in writing scientific reports.

4. Interpret data and to use the appropriate statistical methods in their evaluation.

### 16. Course Reading List and References:

There are some recommended references that can be used for furthermore information:

### • Principles of Instrumental Analysis, Skoog, 6<sup>th</sup> ed.; Thompson: Belmont, CA, 2007.

- Analytical chemistry Gary Christian
- Fundamentals of analytical chemistry , Skoog & West
- Quantitative chemical analysis: D.C. Harris.
- Undergraduate instrumental analysis : Robinson & Frame

17. The Topics:	Dr. AVEEN		
Instrumental analysis definition, advantage and limitations,	1 <sup>st</sup> week		
Introduction of Spectrometric methods, Properties of Electromagnetic	2 <sup>nd</sup> week		
Radiation, Radiation Absorption, electronic excitation			
Beer's Law, Limits to Beer's Law, solving problems	3 <sup>rd</sup> week		
Deviation from Beer law	4 <sup>th</sup> week		
Quantitative Analysis (Beer's Law), Spectrometric analysis using	5 <sup>th</sup> week		
standard curve,			
Simultaneous Analysis of two compounds, Photometric Titrations,	6th week		
Standard Addition Method			
Stoichiometry of complex ions, Continuous Variation Method, Mole-ratio	7th week		
method, Slope- ratio method.			
Fluorescence	8th week		

Ministry of Higher Education and Scientific research

Phosphorescence	9th week			
Chemiluminescence	10th week			
Nephelometry Technics	11th week			
Turbidimetry Technics'	12th week			
Flow Injection Analysis , Theory and Practice, Instrumentation	13th week			
18. Practical Topics (If there is any)				

#### **19. Examinations:**

### **Q1**/ Choose the <u>best answer</u> for each question: [10 marks]

- 1- A sample absorbs too strongly at a particular wavelength. You could decrease the absorbance at that wavelength by each of the following:
  - **a-** Quantitatively diluting the solution. **b-** Using a cell with a shorter path length.
  - **c** Decreasing the molar absorptivity. **d** (a & b), **e** (all of them), **f** (a & c).
- 2- When producing an absorption spectrum, which of the following variables must be held constant?
  a- path length, b- concentration, c- wavelength, d- (a & b) , e- (a & b) , f- (a & c)

### 3- The working versification of the fluorescence formula is

- (a)  $I_f = 2.303 \text{ K }\epsilon \text{ b }C I_o$ , (b)  $I_o = 2.303 \text{ K }\epsilon \text{ b }C I_f$ , (c)  $I_f = 2.303 \text{ K }\epsilon \text{ b }C$ ,  $I_f = \epsilon \text{ b }C$
- 4- Molar absorptivity is designated as  $\epsilon$  with unit? (a) L.mol<sup>-1</sup>.cm<sup>-1</sup>, (b) L.mol.cm<sup>-1</sup>, (c) L<sup>-1</sup>.mol.cm, (d) mol/L.cm<sup>-1</sup>

5- A continuous variation method is used to find?

a- the concentration of analyte , b- the stoichiometric of complexes , c- absorption spectrum Q2/a- Draw the Jablonski diagram with indication of all the followings: [5marks]

V = 9 level of  $S_0$  has similar energy to the V = 0 level of  $S_1$ , V = 8 level of  $S_1$  has similar energy to the V = 0 level of  $S_2$ , Absorption, Vibrational relaxation, Internal conversion, Intersystem Crossing, Quenching, Fluorescence, and Phosphorescence.

**Q4**/ Calculate the concentration of chloride ion in water sample, which was determined by quenching of the fluorescence intensity of quinine, from the following data. [6 marks]

[Cl <sup>-1</sup> ] mol/L	0.00	0.01	0.02	0.04	0.06	0.08	Sample
Fluorescence intensity	100	30.05	18.0	11.0	6.7	5.4	25.0

#### Q5/ Fill the blanks with suitable words. [10marks]

- 1. Transmittance is given as  $T = P/P_o$ ,  $P_o$  is the power incident on the sample and P represent.....
- 2. In UV spectroscopy the cell is made by .....
- 3. When absorbance is plotted against concentration. This plot is known as.....
- 4. The energy of light is related to the wavenumber by the following relation.....
- 5. A functional group which exhibits absorption of electromagnetic radiations in the visible or ultraviolet region is called ......
- 6. Deviation of Beers law divided to ...... and ......
- 7. The detectors are devices that convert .....into.....into....
- 8. Fluorescence's compound usually..... compound and the quantum yield increase with number of......
- 9..... methods used when the substance of interest is **not fluorescent** but may be converted into a fluorescent by reaction with a suitable (nonfluorescent) reagent.
- 10. According to Beer's Law, if the concentration is doubled the absorbance is .....

20. Extra notes: There is no any suggestion.

# 21. Peer review
