

Question Bank/Architectural Thesis/5th Stage

1. Site: Explain the main issues related to your site
2. Why did you select this site?
3. What were the criteria that should be available in a site to be suitable to your project
4. What are your potential points in site?
5. How did you match your project with the site context?
6. Concept: Explain the main issues related to your concept
7. What is your concept
8. What are the sources of your concept?
9. Do you think that your concept is suitable to your project?
10. How can you persuade others about the validity of your concept
11. What are the matching points of the concept and the project
12. What is architectural strategy you applied to transfer the concept to three dimensional form?
13. Can you give examples about similar projects?
14. Plans: Explain the main issues related to your plans
15. What are your main components?
16. How did you allocate the components?
17. Based on what consideration you used this approach in your design
18. What is the main component in this project?
19. How did you reflect the importance of this part in design?
20. What is the standard you used to decide the area?
21. What is number of users?
22. How did you find the area of the main part?
23. How did you solve the circulation?
24. How did you solve the orientation?
25. Did you take ventilation in your consideration? How?
26. In case of emergency how did you solve this need?
27. Elevation: Explain the main issues related to your elevations
28. Why did you use this approach in the elevation?
29. Do you think that this solution is matching the nature of your project?
30. Why did you use these materials in the elevation?
31. Why did you use these colors for the elevations?
32. Do you think that the elevations are going with the urban context?
33. Structure: Explain the main issues related to your structural solutions
34. What are the structural solutions you applied?
35. What is the widest span in the project?
36. What is the depth?
37. Where did you put the expansion joint?
38. Environment: Explain the main issues related to your environmental solutions
39. Did you apply any environmental solutions?
40. Did you make use of sustainability approaches in your design?
41. Landscape; Explain the main issues related to your landscape design
42. What kind of landscaping you suggested
43. What are the expected outdoor activities?

44. Is there any integration of indoor and outdoor design?
45. Engineering services; Explain the main issues related to engineering services
46. What is the air conditioning system you suggest?
47. How it is working?
48. What is area of engineering services
49. How did you estimate these areas?
