I was particularly interested in research matters, and I searched for methods and how to write the research and the important sources for the mentioned research at its time, so I traveled to a number of countries such as Egypt, Iran, Turkey, Bologna, and Sweden to search for the resources designated for my research, and this indicated my keenness To develop science and knowledge about increasing scientific knowledge in the weightlifting and training games in general.

The most important thing in the CV cover is to highlight your personality in front of others and to compare you with your colleagues in terms of scientific, teaching and acquaintances between us.

In fact, there is a lot of difference, each one with the others, and this comparison must be sorted out by specialists.

I have been studying weightlifting, practically and theoretically, since 2009 at the Universities of Soran and Salah al-Din. Each week, it has four practical and theoretical lectures, according to the distribution of lessons.

In teaching, I pay attention to the practical side, as the college has determined 60% of practical lessons and 40% of theory lessons. In practical lessons, I care about the technique and process of lifting from both lifts, the snatch and the jerking.

Master's study (the impact of a training curriculum, a master's study in sports and the extent of my thinking to develop it).

In caring for students, I care a lot about the ethical and educational aspects of students, how to reach a sufficient culture for them, how to take care of students and their understanding of cooperation with others in order for them to cooperate with each other in order to reach the best of what they have of knowledge and knowledge.
