

Comments:

- 1) English language editing is required. Too long sentences were used. Use past tense in writing the manuscript. Solve acronym/abbreviation problems.
- 2) Units: Change style for writing the units. For example, write 673 mm/season, instead of 673 mm season⁻¹. Additionally, change the unit for bulk density from Mg m⁻³ to kg/m³ which is more familiar unit.
- 3) Re-write section of Materials and Methods. This section is very weak and simple. Write numbers for sections and sub-section in the Materials and Methods Part. Add further information and references to support your procedure. Add maps for the site and put design drawings (i.e. plans and sections) and details for the irrigation systems.
- 4) Check this date: The plants were harvested on 11/13/20?
- 5) Use one font type for writing the manuscript. Do not use different fonts.
- 6) Results and Discussions: Add numbers for sections and sub-sections for this part. Add further discussions by comparing your results with the literature. Merge Figures 1 and 2 in one Figure so as to compare between the yielded results. It is preferable to split results and discussions part into the suggested parts:
 - a) Effect of Irrigation system ...
 - b) Impact of fertilizer on ...
 - c) Role of irrigation period ...
- 7) Statistical analysis is necessary in the results and discussions to show the effect of the variables.
- 8) Conclusion part is not available!.
- 9) References: Add further updated references. Remove Ref. [7] because it is too old (1962).
