

### **Question bank of Renewable energy:**

- What are some of the benefits of using renewable energy sources?
- What are some of the challenges or drawbacks of using renewable energy sources?
- What are some of the types of renewable energy sources and how do they work?
- What are some of the differences between renewable and non-renewable energy sources?
- How much of the world's electricity is generated by renewable energy sources?
- Which countries are leading the way in renewable energy production and consumption?
- How can renewable energy sources help reduce greenhouse gas emissions and combat climate change?
- How can renewable energy sources enhance the power grid's reliability, security and resilience?
- How can renewable energy sources create jobs and boost economic growth?
- How can renewable energy sources increase energy access and affordability for remote or low-income communities?
- How can renewable energy sources be integrated with existing energy systems and infrastructure?
- How can renewable energy sources be stored and distributed efficiently and effectively?
- How can renewable energy sources be used for transportation, heating and cooling purposes?
- How can renewable energy sources be scaled up to meet the growing global energy demand?
- How can renewable energy sources be regulated and incentivized by policies and markets?

- How can renewable energy sources be influenced by social and cultural factors and preferences?
- How can renewable energy sources be measured and monitored for their performance and impact?
- How can renewable energy sources be improved by innovation and research?
- How can renewable energy sources be supported by education and awareness campaigns?
- How can renewable energy sources be part of a sustainable and resilient future?

### **Question bank of Environmental Policy:**

- What is environmental policy and why is it important?
- What are some of the main environmental issues that require policy interventions?
- What are some environmental policy instrument types and how do they work?
- What are some of the advantages and disadvantages of regulation, financial incentives, and voluntary agreements as environmental policy instruments?
- What are some of the factors that influence the design and implementation of environmental policies?
- How do environmental policies interact with other policies, such as economic, social, and health policies?
- How do environmental policies vary across different levels of governance, such as local, national, regional, and global?
- How do environmental policies affect different stakeholders, such as governments, businesses, civil society, and individuals?

- How do environmental policies promote environmental justice and equity among different groups and communities?
- How do environmental policies foster environmental stewardship and sustainability in different sectors and domains?
- How do environmental policies support innovation and research for environmental solutions?
- How do environmental policies enhance public awareness and education on environmental issues?
- How do environmental policies cope with uncertainty and complexity in environmental systems?
- How do environmental policies adapt to changing environmental conditions and emerging challenges?
- How do environmental policies evaluate their effectiveness and impact?
